

Where's the Iron Ore?

Team Members: _____

Directions: Use the space below to create a map of your study area which includes the location of the body of ore. Map your transects, and along the transects mark "O" for where there is no ore, and "X" for where there is ore. Also, note where north is located on your map, as well as a few distinguishing features so that the location of the ore can be located in the future.
